**APPLICATION**

10

**FOR UNITED STATES LETTERS PATENT**

----

15

**SPECIFICATION**

20

TO ALL WHOM IT MAY CONCERN:

25       BE IT KNOWN THAT I, CHRISTOPHER J. LESZCZYNSKI, a  
citizen of UNITED STATES OF AMERICA, have invented a new and  
useful HAT MOUNTABLE FLAG of which the following is a  
specification:

# HAT MOUNTABLE FLAG

5

## BACKGROUND OF THE INVENTION

### Field of the Invention

10

The present invention relates to hat mountable devices and more particularly pertains to a new hat mountable device for mounting a flag on a hat.

### 15 Description of the Prior Art

The use of hat mountable devices is known in the prior art. While these devices fulfill their respective, particular objectives and requirements, the need remains for a device that resembles a flag and is  
20 easily mountable to on varying portions of a hat.

## SUMMARY OF THE INVENTION

The present invention meets the needs presented above by  
25 comprising a rod that is elongated and has a first end and a second end. A flag is mounted on the rod. A fastener is attached to the second end of the rod for removably attaching the rod to a hat.

There has thus been outlined, rather broadly, the more important  
30 features of the invention in order that the detailed description thereof that follows may be better understood, and in order that the present contribution to the art may be better appreciated. There are additional

features of the invention that will be described hereinafter and which will form the subject matter of the claims appended hereto.

5 The objects of the invention, along with the various features of novelty which characterize the invention, are pointed out with particularity in the claims annexed to and forming a part of this disclosure.

## **BRIEF DESCRIPTION OF THE DRAWINGS**

10 The invention will be better understood and objects other than those set forth above will become apparent when consideration is given to the following detailed description thereof. Such description makes reference to the annexed drawings wherein:

15 Figure 1 is a schematic perspective view of a hat mountable flag according to the present invention.

Figure 2 is a schematic perspective view of a second embodiment of the present invention.

20 Figure 3 is a schematic cross-sectional view taken along line 3-3 of Figure 2 of the present invention.

## **DESCRIPTION OF THE PREFERRED EMBODIMENT**

25 With reference now to the drawings, and in particular to Figures 1 through 3 thereof, a new hat mountable device embodying the principles and concepts of the present invention and generally designated by the reference numeral 10 will be described.

30 As best illustrated in Figures 1 through 3, the hat mountable flag generally comprises a device 10 that is removably positionable on a hat 12, and ideally a baseball cap type hat. The baseball cap includes a perimeter

edge 14 having a brim 16 attached thereto and an upper button 18 positioned at an apex of the hat 12.

The device 10 includes a rod 20 that is elongated and has a first end 22 and a second end 24. In a second embodiment of the device 10, the rod 20 has a break therein such that a first section 26 and a second section 28 of the rod 20 is defined. A coupler 30 is attached to the first 26 and second 28 sections for pivotally coupling the first 26 and second 28 sections together such that an angle between the first 26 and second 28 sections may selectively be chosen. The angle that may be selected is generally from 45 degrees to 180 degrees. The coupler 30 preferably includes a first portion 32 and a second portion 34 pivotally coupled together by a pin 36. Each of the first 32 and second 34 portions have an inner surface having teeth 38 thereon such that the first 32 and second 34 portions are frictionally coupled together. This allows the selected angle to be retained until the user of the device 10 desires to change the angle.

A flag 40 is mounted on the rod 20 and the flag 40 is positioned generally adjacent to the first end 22 of the rod 20. Preferably, the flag 40 comprises a rigid material and extends outwardly away from the rod 20. Typically, the flag 40 would have indicia printed thereon that may include sports teams, advertising or other indicia.

A fastener 42 is attached to the second end 24 of the rod 20 for removably attaching the rod 20 to the hat 12. In a first embodiment shown in Figure 1, the fastener 42 includes a U-shaped clip having a pair of legs 44 and a central section 46 extending between the legs 44. The rod 20 is attached to one of the legs 44 such that a longitudinal axis of the rod 20 extends through each of the legs 44. This type of fastener is used for attaching the device to the perimeter edge 14 or brim 16 of the hat 12. In

the second embodiment, shown in Figure 2, the fastener 42 includes a plate 48 attached to the rod 20. The plate 48 is positioned in a plane orientated generally perpendicular to the longitudinal axis of the rod 20. The plate 48 has a peripheral edge 50 having a slot 52 extending therein for  
5 removably receiving the upper button 18 of the hat 12.

In use, the device 10 is selectively positioned on a hat 12, such as a baseball cap, for advertisement purposes, cheering on a sports team, or for novelty purposes. The rod 20 may be selectively angled for  
10 individualizing the device 10.

With respect to the above description then, it is to be realized that the optimum dimensional relationships for the parts of the invention, to include variations in size, materials, shape, form, function and manner of  
15 operation, assembly and use, are deemed readily apparent and obvious to one skilled in the art, and all equivalent relationships to those illustrated in the drawings and described in the specification are intended to be encompassed by the present invention.

20 Therefore, the foregoing is considered as illustrative only of the principles of the invention. Further, since numerous modifications and changes will readily occur to those skilled in the art, it is not desired to limit the invention to the exact construction and operation shown and described, and accordingly, all suitable modifications and equivalents may  
25 be resorted to, falling within the scope of the invention.
